SUMMARY

Full-stack engineer delivering production software and autonomous AI coding workflows. Uses Codex, Claude Code and Devin for development; built roadmap-driven, multi-agent task orchestration for production software and cloud infrastructure.

ENGINEERING EXPERIENCE

XR CAPSULES | Principal Engineer / Technical Lead Mar 2025 – Present

• Built React/Next.js applications, Python/FastAPI APIs, authentication, billing, and cloud GPU workflows; owned architecture, deployment, and production debugging.

• **Created GPC for Gaussian-splat PLY** files, cutting GPU encoding time 10x and reducing compute costs for the encoding stage.

• **Built SceneAtlas density-map wall detection,** RANSAC alignment, and spatial analysis to generate vector floor plans from Gaussian splats using AI integrations.

WEB3DEALFLOW | Full-Stack Developer (Contract) Sep 2025 – Feb 2026

• **Built React/TypeScript/Next.js features and backend** integrations; supported Docker development environments and CI/CD workflows.

MOKUNI LLC | Game Developer May 2024 – Feb 2025

• **Built a Unity/C# visual narrative** editor, branching progression, and persistent save/load systems so non-engineers could author stories independently.

INDEPENDENT | Projects & Collaborations 2023 – Present

• **Independently built and deployed a** metaverse game review website on AWS using React, TypeScript, GraphQL, MongoDB, and Sass.

• Built Musubi Motion agent workflow with roadmap-based task selection, decomposition, and parallel execution through an orchestrator.

ONEFI | Blockchain Developer Mar 2022 – Feb 2023

• **Built Solidity/EVM pooling, deposit, withdrawal,** and reward logic; integrated Web3 interfaces and supported audit remediation and deployment validation.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, C#, SQL, Swift

Web & APIs: React, Next.js, FastAPI, Node.js, REST APIs

Cloud & data: PostgreSQL, Supabase, AWS, Railway, RunPod

AI tooling: Codex, Claude Code, Cursor, Devin
